DAILY AIR QUALITY AND POLLEN DATA

September 29, 2016

Air Quality Index (AQI*)	31
AQI Category	GOOD
Responsible Pollutant	OZONE
OZONE 1-Hr Maximum	0.037 ppm
OZONE 8-Hr Maximum	0.034 ppm
PM 10	13 ug/m ³
PM 2.5**	6.9 ug/m ³

Pollen Data

Pollen Counts Have Been Temporarily Discontinued

DATE	---
CONC. grains/m ³	---
INDEX	---
PREDOMINATE POLLEN TYPE	---

[Additional Pollen Information & Data](#)

*The Air Quality Index incorporates into a single index maximum concentrations of five criteria pollutants: ozone (1 and 8 hour averages),

particulate matter, carbon monoxide, sulfur dioxide, and nitrogen dioxide. In Huntsville, ozone and fine particulate are the pollutants of principal concern. The scale of the index (0 - 500) is divided into general categories that are associated with health messages.

**AQI values for fine particulate matter (PM2.5) are based on continuous monitoring data, rather than a Federal Reference Method (FRM). FRM data are more accurate, but are not available within 24-hour

2016 SEASONAL OZONE DATA - Maximum Values

AIRPORT ROAD SITE		CAPSHAW ROAD SITE	
DATE	8-HOUR AVERAGE	DATE	8-HOUR AVERAGE
6/10/16	.070	6/10/16	.077
